SKILLS & TECHNOLOGY

Comfortable with:

- WordPress Development
- PHP
- JavaScript (ES6+)
- RESTful APIs
- Webpack & Gulp
- Git & Github
- HTML & CSS
- SASS
- Bootstrap.css

Familiar with:

- React.js (16.8+)
- Node.js & Express
- MySQL & MongoDB
- jQuery

Some Exposure to:

- Laravel & CodeIgniter
- Docker & Lando
- Circle CI/CD
- Gatsby.js
- Shopify Development
- Drupal
- PostgreSQL
- GraphQL
- Vue.js

FORMAL EDUCATION

Northeastern University
Boston, MA – May 2012
B.S. in Business Administration
(Finance Concentration)

HOBBIES & INTERESTS

- Hiking & Backpacking
- Fly-fishing
- Photography

PROFESSIONAL EXPERIENCE

National University WordPress Developer

June 2021 – present
Remote

Support the ongoing development and maintenance of National University's flagship website, as well as sites for various affiliated schools and subsidiaries. Assist the broader University marketing department with ongoing rebranding initiatives and feature-builds. Perform code reviews and provide guidance for junior-level developers. Manage internal build processes and code deployments.

Recent Project Highlights:

- **SMS Form Submission Autoresponder:** In an effort to support the University marketing & enrollment teams, built out functionality that will – under very specific circumstances – send a prospective student a follow-up SMS text upon submitting a standard request-for-information form. Involved multiple third-party API integrations, extensive use of WordPress hooks, and heavy customizations to existing form plugins.
- **Custom Metabox Data Converter:** In an effort to migrate multiple sites from a legacy 'custom meta field' plugin to a more modern solution, developed a custom plugin to ensure no existing data or content would be lost in the transition. Plugin scans the WordPress database for legacy custom fields, converts the data into a structure that's compatible with the new custom field solution, and then deletes the legacy data. Plugin was built to be easily-extendable & reusable across all sites we manage.

Stilts Media Designs Co, Auxilia Website Design Contract Full-Stack Developer

Mar 2019 – July 2021
Remote

Operated as a business-to-business subcontractor, completing regular work on a weekly basis for two established development agencies. Projects varied in size and scope, including custom-built WordPress solutions, full-stack JavaScript web apps, large-scale eCommerce builds, and basic troubleshooting & maintenance of client legacy projects.

Project Highlights:

- **Applicant Progress Tracker:** For a major global car brand's newly-developed careers microsite, built out a fully-custom progress-tracking system for registered users. System tracks a registered user's activity and saves their progress as they move through the various sections of the site. Also enables users to 'bookmark' pages, posts, or videos to their profile page for later viewing.
- **Digital Advertisement Scraping App:** Assisted in building a full-stack JavaScript app that takes a user-entered URL and scrapes that site for certain advertising-related content. For each result found within the scraped site, various metadata is saved along with a screenshot and a timestamp. Results are saved to a database, which can then be viewed, edited, or deleted by the user. Uses Strapi.io and Node.js on the back-end, SQLite as the database, and React.js on the front-end.

PREVIOUS PROFESSIONAL EXPERIENCE

Trader Joes

Crew Member, Frozen Section Leader

Sept 2017 – Jul 2021

SeekingAlpha.com

Contributing Author – Stock Market Analysis

Apr 2013 – Feb 2017

State Street Corporation
